

# Web pages are *styled* with CSS

```
h1 {font-size: 18px;}
```

```
p {font-size:1em;}
```

```
b {  
  font-weight:bold;  
  color: blue;  
}
```

```
i {  
  font-style:italic;  
  color:green;  
}
```

## How did **Oxford** get its name?

The **name Oxford** comes from the old term '*Oxanforda*' which literally meant a ford (shallow crossing) in the river where the cattle (Oxen) could cross safely.

**Web pages are *not usually*  
*built with* HTML**

**Because this is unmanageable**

**It is more efficient with an  
editor and some logic for  
conversion to HTML**
