The Jackson Cookbook

JSON Recipes in Java

Ted M. Young

Jackson is a popular, high-performance JSON processor for Java, but with its wealth of features can come complexity. This book helps you with its cookbook approach: each recipe discusses and then solves a problem, showing you how to best use Jackson to get your work done.

```
@JsonProperty      @JsonCreator
String firstName    public Portfolio
@JsonValue          public String toString()

{
  "title": "Jackson Cookbook",
  "subtitle": "JSON Recipes in Java",
  "author": {
    "name": {
      "first": "Ted",
      "middle": "M",
      "last": "Young"
    },
    "twitterId": "@jitterted",
    "website": "http://about.me/tednyoung"
  },
  "url": "https://leanpub.com/jacksoncookbook",
  "language": "English",
  "version": "0.1"
}

ObjectMapper objectMapper = new ObjectMapper();
objectMapper.writeValue(jsonWriter, portfolio);
```

Authoring Incrementally

- Publishing systems need to offer versioning
- Metadata can include a status
 - being edited, under review, release candidate, needs updating etc.
- Editors can have different levels of control from authors
