

# Page break within elements

- To avoid page breaks within blocks use `page-break-inside:avoid`
- but this is NOT rigidly applied
- So accept that some elements will cross over page breaks

# Widows and Orphans

- end of paragraph widows can be controlled by adding non-breaking space between last 2 or 3 words or by using javascript
- end of page widows / start of page orphans cannot be controlled although:
- there are CSS rules available but not supported yet
